PROJECTS

DETRIMENTAL INGREDIENT DETECTION SYSTEM

- Developed web-based tool utilizing Python and Flask for identifying harmful ingredients from product labels.
- Implemented Tesseract OCR for accurate text extraction from images.
- Applied machine learning algorithms (Naive Bayes, LSTM) for ingredient classification.
- Provided instant feedback on ingredient safety to enhance consumer transparency.
- Designed user-friendly interface to improve accessibility for consumers.

SPICY BISTRO

- Developed user-friendly web platform enabling customers to browse menus, make reservations, and provide feedback.
- Enhanced customer engagement through simplified interactions and secure data handling.
- Implemented strong encryption and authentication measures to ensure data security.
- Reduced administrative burdens and minimized errors in restaurant operations.
- Empowered restaurants to connect effectively with patrons, promoting satisfaction.

SECURE EXAMINATION PAPER TRANSMISSION

- It is a web-based platform that automates question paper generation and distribution using AI and Blockchain, ensuring transparency, tamper-proof storage, and prevention of paper leakage.
- Faculty can upload categorized questions, and the system randomly generates papers based on predefined rules, reducing manual effort and ensuring fairness across exams.
